

Comark can help aid Compliance

Temperature Monitoring and Mapping Services
for Vaccine Storage

CONSIDER THESE CHILLING QUESTIONS...

- Are you faced with rapid expansion of storage facilities to cope with demand?
- What could happen if you don't remember to monitor temperature sensitive stock?
- Choose a fridge and take a stock check. Can you afford to lose it and could you still supply sufficient quantities of vaccines?
- Who monitors your chilled areas at night?
- Do your Auditors want more regular temperature monitoring?

If the answer to any of the above questions was YES, why not take advantage of a FREE, no obligation consultation with a member of the Comark Team

Comark has a wealth of experience in health service applications and can offer expert advice on temperature monitoring and mapping, whether it is the installation of new equipment or the expansion of an existing monitoring system.

Monitoring with Comark

Storage and transport temperatures of perishable goods such as vaccines and costly test reagents should be carefully monitored to ensure they remain within correct limits.

Comark's RF500 wireless system provides 24 hour monitoring with alarm and reporting features to help ensure safe temperatures are maintained throughout the cold chain, avoiding the loss of expensive produce and keeping to optimum safety requirements.

The RF500 wireless system can be easily expanded as requirements change.

Comark also produces a range of data loggers. Please ask a member of our team for advice.

RF500 Wireless Temperature Monitoring

With conventional wireless monitoring systems, important data can be lost due to transmissions being blocked. This results in unacceptable gaps in your due diligence records.

Comark's RF500 wireless monitoring system uses the latest mesh networking and bi-directional communications.

- Available with combination of application specific probes.
- Exceptional data integrity for complete peace of mind.
- Monitors temperature, humidity and events.
- Full record keeping and choice of alarm notification via screens, email, SMS or voice.
- Multi-user access via web browser - no software required.
- BioCote® antimicrobial protected surfaces provide an additional line of defence in high-risk environment.

On-Site

Accurate calibration of instruments is a vital way of maintaining quality standards and demonstrating to regulatory bodies that adequate safeguards are in force.

Comark's on-site UKAS accredited temperature calibration service for RF monitoring systems makes it easier than ever.

In addition to our on-site service, we also provide temperature mapping, full RF installation and instrument service.

- Convenient on-site calibration minimises 'down time'
- Accreditation in accordance with recognised International Standard ISO/IEC 17025:2005.
- Certify your instruments over the range -40°C to +150°C.
- National coverage provided by our team of specialised engineers.

Automate your temperature monitoring and enjoy peace of mind.

- Enjoy 24 hour coverage of all areas.
- Peace of mind even when department is not staffed.
- Know about problems before they happen.
- Put time spent on manual monitoring to better use.
- Have accurate readings when you want them.
